

solution **FINISH**

Solution Finish easily restores faded, discoloured oxidized surfaces to a “better than new” finish - without the “wet look”.

Just 4 basic easy steps to Solution Finish success:

1. Wipe surface to be treated thoroughly with rubbing alcohol.
2. Shake Solution Finish bottle very well before opening.
3. Apply a small amount of product to microfibre sponge.
4. Wipe product on the surface you're treating, then thoroughly wipe off excess surface oil with microfibre towel.

(See additional tips and information on reverse.)

TIPS FOR USING SOLUTION FINISH

Please read complete instructions before using.

www.gondolier.co.za

- **Wear gloves and eye protection. Solution finish can stain clothing.**
- **Spread a thin coat over area in an even motion, covering it completely.**
- **No masking required, but be sure to remove any solution from painted surfaces.**
- **To prolong shelf life, periodically shake bottle vigorously.**

CAUTION: Can cause Spontaneous Combustion. Solution Finish contains an organic oil. Oils of this type can generate heat as it dries, which can cause spontaneous combustion. Oily rags, applicators and materials in contact with Solution Finish can cause spontaneous combustion fires if not handled properly. Never pile used oily materials or leave where heat is present.

Immediately after use and before disposal or storage:

1. Hand wash towels and sponges with detergent and rinse well.
2. Spread all rinsed materials outside to dry by flattening them in an airy spot.
